

3.2 x 2.7 x 1.1mm Red & Pure Green SMD

OSRP1206C1C

■Features

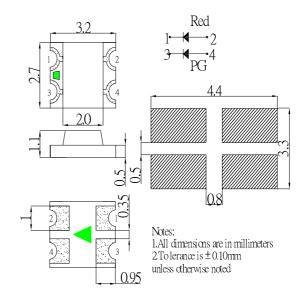

- Bi-Color
- Super high brightness of surface mount LED
- Water Clear Flat Mold
- Compact package outline (LxWxT) of 3.2mm x 2.7mm x 1.1mm
- Compatible to IR reflow soldering.

Applications

Backlighting (switches, keys, etc.)
Marker lights (e.g. steps, exit ways, etc.)

.

Outline Dimension

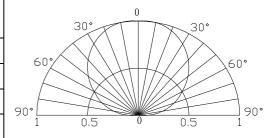

■Absolute Maximum Rating

(Ta=25°C)

| Item | Carrala a 1 | Value | | | |
|----------------------------|-------------------|--------|-----------|----------------------|--|
| пеш | Symbol | HR | PG | Unit | |
| DC Forward Current | I_F | 20 | 20 | mA | |
| Pulse Forward Current# | I_{FP} | 100 | 100 | mA | |
| Reverse Voltage | V_{R} | 5 | 5 | V | |
| Power Dissipation | P_D | 68 | 48 | mW | |
| Operating Temperature | Topr | -40 ~ | -40 ~ +85 | | |
| Storage Temperature | Tstg | -40~ - | +85 | $^{\circ}\mathbb{C}$ | |
| Lead Soldering Temperature | Tsol | 260°C/ | 10sec | = | |

■Directivity

#Pulse width Max 0.1ms, Duty ratio max 1/10

■ Soldering Conditions

| | Reflow Soldering | Har | Hand Soldering | | | |
|------------------|------------------------------|----------------|-----------------|--|--|--|
| Pre-Heat | 180 ~ 200°C | | | | | |
| Pre-Heat Time | 120 sec. Max. | | | | | |
| Peak temperature | 260°C Max. | Temperature | 350°C Max. | | | |
| Dipping Time | 10 sec. Max. | Soldering time | 3 sec. Max. | | | |
| Condition | Refer to Temperature-profile | | (one time only) | | | |

• Reflow Soldering Condition(Lead-free Solder)

- *Recommended soldering conditions vary according to the type of LED
- *Although the recommended soldering conditions are specified in the above table, reflow, or hand soldering at the lowest possible temperature is desirable for the LEDs.
- *A rapid-rate process is not recommended for cooling the LEDs down from the peak temperature.
- •All SMD LED products are pb-free soldering available.
- Occasionally there is a brightness decrease caused by the influence of heat or ambient atmosphere during air reflow. It is recommended that the User use the nitrogen reflow method.
- Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable a double-head soldering iron should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
- Reflow soldering should not be done more than two times.
- When soldering, do not put stress on the LEDs during heating.
- After soldering, do not warp the circuit board.

OSRP1206C1C

■ Cautions:

- 1. After open the package, the LED's floor life is 4 Weeks under 30℃ or less and 60%RH or less(MSL:2a).
- 2. Heat generation must be taken into design consideration when using the LED.
- 3. Power must be applied resistors for protection, over current would be caused the optic damage to the devices and wavelength shift.
- 4. Manual tip solder may cause the damage to Chip devices, so advised that heat of iron should be lower than 15W with temperature control under 5 seconds at 230-260 deg. C. (The device would be got damage in re working process, recommended under 5 seconds at 230-260 deg. C)
- 5. All equipment and machinery must be properly grounded. It is recommended to use a wristband or anti-electrostatic glove when handing the LED.
- 6. Use IPA as a solvent for cleaning the LED. The other solvent may dissolve the LED package and the epoxy, Ultrasonic cleaning should not be done.
- 7. Damaged LED will show unusual characteristics such as leak current remarkably increase, turn-on voltage becomes lower and the LED get unlight at low current.
