

■Features

- Intelligent reverse connect protection, the power supply reverse connection does not damage the IC.
- The control circuit and the LED share the only power source.
- Control circuit and RGB chip are integrated in a package of 3528 components, form a complete control of pixel point.
- Built-in signal reshaping circuit, after wave reshaping to the next driver, ensure wave-form distortion not accumulate.
- Built-in electric reset circuit and power lost reset circuit.
- gray level adjusting circuit (256 level gray scale adjustable)
- Cascading port transmission signal by single line.
- Any two point the distance more than 5m transmission signal without any increase circuit.
- Using a typical data transmission frequency of 800 Kbps, when the refresh rate of 30 frames per sec

■Applications

- LED decorative lighting, Indoor/outdoor LED video irregular screen
- Full-color module, Full color soft lights a lamp strip.

■Absolute Maximum Rating (Ta=25°C)

Item	Symbol	Value	Unit
Power supply voltage	V _{DD}	+3.7~+5.5	V
Input voltage	V _I	-0.5~V _{DD} +0.5	V
Operation junction temperature	T _{opt}	-40~+85	°C
Storage Temperature	T _{stg}	-40 ~ +85	°C

■Electrical Characteristics (Ta=20~+70°C, VDD=4.5~5.5V, Vss=0V unless otherwise specified)

parameter	Symbol	minimum	typical	maximum	unit
Chip input voltage	V _{DD}	3	5	7.5	V
R / G / B output port withstand voltage	V _{ds}	8.5	9	9.5	V
R / G / B output drive current	I _O	9.6	12	14.4	mA
High level input voltage	V _{IH}	0.7 V _{DD}	0.9 V _{DD}	V _{DD}	V
Low level input voltage	V _{IL}	0	0.1 V _{DD}	0.3 V _{DD}	V
Dout pull current capability	I _{DOH}	-	15	-	mA
Dout current filling capacity	I _{DOL}	-	30	-	mA
PWM frequency	f _{PWM}	3	4	5	KHZ
Static power consumption	I _{DD}	0.4	0.65	0.9	mA

■Outline Dimension

NO.	Symbol	Function description
1	VDD	Power supply LED
2	DOUT	Control data signal output
3	GND	Ground
4	DIN	Control data signal input

Recommended dimensions for PCB

■Directivity

■ **Switching Characteristics** (TA=-20~+70℃, VDD=4.5~5.5V, VSS=0V, unless otherwise specified)

Parameter	Smbol	Min	Typical	Max	Unit	Test conditions
The speed of data transmission	fDIN	---	800	1100	KHZ	The duty ratio of 67% (data 1)
Transmission delay time	TPLH	---	---	200	ns	DIN→DOUT
Output current conversion time	Tr	---	---	400	ns	VDS=1.5 IOUT=12mA
	Tf	---	---	400	ns	

■ **LED Characteristic Parameter**

Emitting color	Wavelength (nm) IF=12mA	Luminous intensity (mcd) IF=12mA
Red	620-630	150-350
Green	520-530	800-1300
Blue	460-470	120-240

■ **The Data Transfer Time**

Name		Min.	Standard value	Max.	Unit
T	Code period	1.20	--	--	μs
T0H	0 code, high level time	0.2	0.3	0.4	μs
T0L	0 code, low level time	0.6	--	--	μs
T1H	1 code, high level time	0.58	0.65	1.0	μs
T1L	1 code, low level time	0.2	--	--	μs
Trst	Reset code, low level time	≥80	--	--	μs

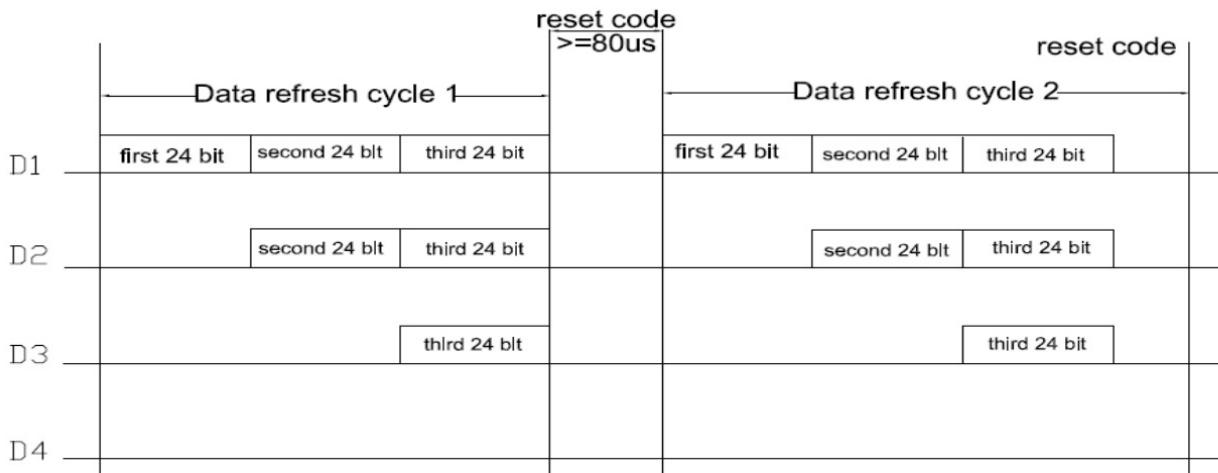

■ **Sequence Chart:**

■ **Cascade Method:**

■ **Data Transmission Method:**

Note: the D1 sends data for MCU, D2, D3, D4 for data forwarding automatic shaping cascade circuit.

■ **Composition of 24bit Data:**

G7	G6	G5	G4	G3	G2	G1	G0	R7	R6	R5	R4
R3	R2	R1	R0	B7	B6	B5	B4	B3	B2	B1	B0

Note: high starting, in order to send data (G7 - G6 - B0)

■ **Typical Application Circuit:**

Carrier Tape (Unit: mm)

■ **Moisture-proof Bag**

■ General Description

OSS85ST63 is a smart LED control circuit and light emitting circuit in one controlled LED source, which has the shape of a 3528 LED chip. Each lighting element is a pixel, and the intensities of the pixels are contained within the intelligent digital interface input. The output is driven by patented PWM technology, which effectively guarantees high consistency of the color of the pixels. The control circuit consists of a signal shaping amplification circuit, a built-in constant current circuit, and a high precision RC oscillator.

The data protocol being used is unipolar RZ communication mode. The 24-bit data is transmitted from the controller to DIN of the first element, and if it is accepted it is extracted pixel to pixel. After an internal data latch, the remaining data is passed through the internal amplification circuit and sent out on the DO port to the remaining pixels. The pixel is reset after the end of DIN. Using automatic shaping forwarding technology makes the number of cascaded pixels without signal transmission only limited by signal transmission speed.

The LED has a low driving voltage (which allows for environmental protection and energy saving), high brightness, scattering angle, good consistency, low power, and long life. The control circuit is integrated in the LED above.

■ Storage

· Storage Conditions

Before opening the package:

The LEDs should be kept at 30°C or less and 60%RH or less. The LEDs should be used within a year. When storing the LEDs, moisture proof packaging with absorbent material (silica gel) is recommended.

· After opening the package:

Soldering should be done right after opening the package (within 24hrs).

Keeping of a fraction, sealing and Temperature: 5~30°C Humidity: Less than 30%.

If the package has been opened more than 24Hours, components should be dried for 12hrs, at 60±5°C.

· Optosupply LED electrode sections are comprised of a silver plated copper alloy. The silver surface may be affected by environments which contain corrosive gases and so on. Please avoid conditions which may cause the LED to corrode, tarnish or discolor. This corrosion or discoloration may cause difficulty during soldering operations. It is recommended that the User use the LEDs as soon as possible.

· Please avoid rapid transitions in ambient temperature, especially in high humidity environments where condensation can occur.

■ Soldering Heat Reliability:

Reflow soldering Profile

· Reflow soldering should not be done more than two times.

· When soldering, do not put stress on the LEDs during heating.

· After soldering, do not warp the circuit board.

· Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable,

a double-head soldering iron should be used. It should be confirmed beforehand whether the

characteristics of the LEDs will or will not be damaged by repairing.

Solder=Low Lead Free
Average ramp-up rate = 3°C/sec. max.
Preheat temperature: 160°~200°C
Preheat time = 120 sec. max.
Ramp-down rate = 6°C/sec. max.
Peak temperature = 245°C max.
Time within 3°C of actual peak temperature = 25 sec. max.
Duration above 220°C is 40 sec. max.
